BIG BAG
EMPTIER

SIMPLIFY AND SPEED UP THE PHASES OF DISCHARGE

The system makes it possible to **separate the product unloading point from the mixing room**. It ensures improved cleanliness during product unloading, **convenient and fast** unloading operations because the **operator works** with a big bag hoist **in safety conditions** and no physical effort is required to lift the bag.

ADVANTAGES

- It improves the operating flow; the emptying unit also works as product micro-storage buffer to ensure continuous feeding to the product plant
- It is equipped with a dust extraction system so that powder is not scattered into the work environment
- The unit can be equipped with an optional screening mesh to ensure the product conveyed to the production plant does not contain foreign matter

All our products comply with:

All regulations for specific applications
(ATEX, food regulations, safety, seismic
codes etc.)
